Dear Robin,

Rachid had sent the attached file to Bettie and Jan last week. I also sent it to the analysts. Mark Bentley questioned why the 24-hour and creatinine ratios are reported to 3 decimal places when the MDA in urine concentrations are only reported to 2 decimal places. CCLS indicated that all the calculations have been set to three decimal places to avoid any rounding errors as they did not want any ratios to be reported as 0.

Mark feels comfortable leaving the calculations as is, as this is a pilot study. Please let me know today if you would like us to adjust the number of decimal places. CCLS can make the change easily for data not yet reported but would need time to adjust values that have already been reported (this will not affect the time line). Please contact me if you want to discuss further.

Regards,

Jill

Dear Bettie,

In response to your concern regarding Ur11-Dehy-Thrombox/24hr values. Eric has compiled the attached list of biomarkers and lab tests we currently have. The list contains minimum and maximum values for each test. Please verify that these numbers and their units make sense. Please let me know if there are any required changes.

Thank you
